

ABSTRACT OF THE DISCLOSURE

The invention provides a floor mat system having a plurality of floor mats disposed in edge-to-edge relationships. The floor mats are held in place with clips that prevent the mats from creeping over each other while allowing the mats to be lifted from the floor. One embodiment of the invention provides that each floor mat is held down with four clips disposed at the corners of the floor mat. Another embodiment provides mats held in place with clips positioned at the centers of the mats.

1. A floor mat system comprising a plurality of floor mats disposed in edge-to-edge relationships, the floor mats being held in place with clips that prevent the mats from creeping over each other while allowing the mats to be lifted from the floor.

2. The floor mat system of claim 1, wherein each floor mat is held down with four clips disposed at the corners of the floor mat.

3. The floor mat system of claim 1, wherein the clips are positioned at the centers of the mats.
